# Escalation Email

**SUBJECT:** Critical Alert Escalation – Ransomware Activity

Dear Tier 2 SOC Team,

A critical alert has been detected involving potential ransomware activity on Server-X. Initial investigation identified a suspicious executable file named crypto_locker.exe communicating with IP address 192.168.1.50.

The affected host has been immediately isolated from the network to prevent lateral movement. Relevant logs and indicators of compromise have been preserved for analysis.

Further investigation is required to determine the full scope of the incident and verify whether additional systems are affected.

Please assist with deeper forensic analysis and remediation actions.

**Regards,**
SOC Analyst
